

Spill Control **-the essentials**

A simplified range of spill care products
to make choosing less complicated

ESP
evolution
sorbent products

Uniquely different - altogether better

Simpler choices making spill control easy to understand

What if sorbents were explained and presented in a less confusing way? We have led the absorbent industry for quite some time by developing new ideas and products. This catalog is a new idea and one that will make understanding, specifying, and using the right solution much faster and easier.

We have taken the best of the best and in some cases combined features, and presented them in a tight grouping of options. This is not to say that we have stopped making all our product ranges, just that we think that these products cover the spectrum better.

Spill control in four easy steps

1. Choose the type that's right for where the spill or leak is - see pages 4 and 5 to explain the options.
2. Decide if you need a solution that is durable, high capacity or economical - see pages 6 and 7 for more information on this.
3. Select the best construction of the absorbent to suit its use. On pages 8 and 9 we explain about lamination and other features which make the absorbent more durable or increase absorbency in certain situations.
4. See which technology is best suited to

the spill you're tackling. Pages 10 and 11 show all our sustainable sorbents plus the more traditional Meltblown choice.

Happy to help

Bottom line - simplicity helps you and your customer understand the options. This helps make a seemingly complicated product into an easy and profitable proposition.

“ Tips ”

You'll find product tips throughout this catalogue to help answer everyone's questions with confidence and ease.

Birthplace of sustainable absorbents

ESP has led the industry with the development of the most extensive line of sustainable absorbents anywhere. They are generally higher performing and less expensive than traditional Meltblown.

Three types of absorbent **-which one do you need?**

Have you noticed how some absorbents are gray in color, some are white and others are yellow? This is an industry standard that remains constant to help users identify which type they need at a moment's notice. Below we've explained what color to use for different types of spills and when to use them.

Maintenance absorbents are gray in color and are also sometimes referred to as Universal - for sake of clarity we'll stick with Maintenance throughout this catalog. As a general rule of thumb if the spill has happened indoors use a gray product to absorb both oil- and water-based substances (technically referred to as hydrophilic).

Oil-only absorbents are best used outdoors to absorb just oil-based spills (gas, diesel, solvents) and are technically referred to as hydrophobic. These products are white in color and also come in a range of shapes and sizes.

Chemical or toxic spills require polypropylene Meltblown absorbents. These are yellow in color and are referred to in this catalog as 'Chemical'. Please remember that chemical spills can be extremely hazardous and should not be cleaned up without the correct training or protective equipment.

Look for these icons throughout this catalog to identify the absorbent type

Maintenance

Gray in color, and absorbs both water- and oil-based spills. Best choice for almost any situation.

66 Tips 99

If you are indoors then this type works most often.

Oil-only

White in color, these absorb just oil-based spills. They are best used outdoors.

66 Tips 99

If you are outside this type is a must.

Chemical

Yellow in color and used to clean up unknown toxic, flammable, corrosive and aggressive chemical spills. These can be used indoors or out.

66 Tips 99

Choose this if there is a concern about what may be absorbed. Chemical absorbents will do the same job as Meltblown Maintenance but are in a high visibility color.

Absorbent weight **-how to make an informed choice**

OK, so now you know how to choose the right absorbent type, the next thing to decide is what weight you'll need. The fabric weight is specified in 'GSM' which is how heavy a square meter of fabric is reported in grams. We've separated our absorbents into four weights.

Please note all specifications stated in this catalog have a statistical average of $\pm 5\%$

Extra heavy weight

Extra heavy weight absorbents are available in our Elite range

Elite
★★★★★

**Fine Fiber
Meltblown**

**Ultraclean™
Poly Backed**

The heaviest and as a result the most durable of our absorbents. They come in 100 sheets per bale and rolls that are 150' long. The fabric weight is 380 gsm and all pads are boxed and weigh approximately 17 pounds each. Rolls are boxed and weigh 29 pounds.

“ Tips ”

Mostly used indoors, for higher end leak maintenance problems. Higher end and larger manufacturers are prime users of this weight. Very popular in the northeast ranging all the way to the Rockies.

Heavy weight

Heavy weight sorbents are available in our Premier and Classic ranges

Premier
★★★★

**Coldform2™
Laminated**

**Meltblown
Single Sided
Laminate**

Classic
★★★

**Airmatrix™
Laminated**

**Meltblown
Sonic Bonded**

The industry standard, all round performer. These absorbents come in 100 sheets per bale and rolls that are 150' long. Fabric weight is 286 gsm and some pads are boxed (these are in the Premier range). Pads weigh approximately 12 pounds and rolls weigh approximately 23 pounds.

“ Tips ”

Less expensive as compared to extra heavy weight. Good durability and absorbent capacity. When in doubt, this weight crosses with most all of our competitors. Used everywhere.

We've introduced a symbol that contains the weight so - 'XH' is Extra Heavy, 'H' is Heavy, 'M' is Medium and 'L' is Light. To make life easier we've also sorted our best selling absorbents into four tight product groups - see pages 12 and 13 for an 'at a glance' overview.

Medium weight

Medium weight sorbents are available in our Classic and Value ranges

Classic
★★★

Value
★★

Meltblown
Sonic Bonded

Meltblown

An excellent economy choice. These absorbents have 100 sheets per bale and rolls are 150' long. Fabric weight is 242 gsm and pads weigh approximately 9 pounds, the rolls weigh approximately 18 pounds.

“ Tips ”

Great value and sound performance. What these absorbents lack in durability they make up for in economy. Used mainly in the southern states and in the northwest. If price is the main driver, medium weights are the solution.

Light weight

Light weight sorbents are available in our Classic and Value ranges

Classic
★★★

Value
★★

Meltblown
Sonic Bonded

Coldform2™
Single sided
Laminate
Meltblown

200 pads per bale make this weight unique. Rolls are 300' not 150'. Fabric weight is 165 gsm, but the bails are heavy because they contain 200 sheets at 14.5 pounds. Rolls weigh 25 pounds.

“ Tips ”

Great for small leaks and spills when the entire sorbent may not be used. Per sheet, the best cost even though the individual weight of the product is almost half of the heavy weight.

Absorbent construction - what's the difference?

The next decision you'll need to make is on how the absorbent is constructed. This might all seem a bit bewildering at first, but in our section by section explanation, all will become clear.

Poly-backed

This family is made by gluing a tough no-lint top sheet to a highly absorbent core. The bottom sheet is made from medical grade low slip poly.

The sorbent has a leakproof back, which is also low slip. Use these where plant hygiene is king. Absorbing a drip or leak is great but keeping it off the clean floor is better. SpillLock™ in gray Maintenance makes these the industry's smartest absorbents.

Tough no-lint top sheet
Highly absorbent core
Medical grade low-slip poly backing

Available in-

Elite
★★★★★
Ultraclean™

Fine fiber

This family is made by sonically bonding a top and bottom thin sheet of fine fiber Meltblown to a high absorbent Meltblown core.

High end MRO applications like these, as they absorb quickly and are durable.

Fine fiber top sheet
Sonically bonded highly absorbent core
Fine fiber bottom sheet

Available in-

Elite
★★★★★
Meltblown

Laminated

This family is made by joining a tough no-lint top and bottom sheet to an absorbent core.

This construction method produces a sorbent which has virtually no lint and is very strong. Great for work around sharp objects or where lint is a problem, for example in the steel fabrication industries and food processing industries.

Tough no-lint top sheet
Absorbent core
Tough no-lint bottom sheet

	SK= Spill Kit	Y= Yellow		PLY= Poly Backed	
	S= Sock	Chemical			

Single sided laminate

This family is made by joining a tough no-lint top sheet to an absorbent core.

The best "go to construction type" as it has all the features you need. Great for rolls and split rolls as it withstands foot traffic well.

Tough no-lint top sheet
Highly absorbent core

Available in-

Premier
★★★★

Meltblown

Classic
★★★

Airmatrix

Sonic bonded Meltblown

This family is made of one layer of Meltblown fibers which have been tacked together every quarter inch. This process lowers the lint and increases the strength of the sorbent.

This construction method yields the most widely used Meltblown family; good absorbency though less durability. A great choice for the marine spill folks.

Sonic bonding lowers lint and
increases strength

Available in-

Classic
★★★

Meltblown

Meltblown

This family is made of one layer of Meltblown fibers. It is more absorbent as compared to sonic bonded but is 'lindy' and not very strong. This construction method yields the least expensive family.

This is a favorite for the spill contractors and the most price-sensitive customers.

Single layer of
Meltblown fibers

Available in-

Value
★★

Meltblown

Absorbent technologies

Here we'll explain briefly how our different absorbent technologies work and how they set the benchmark for others to try and match. We have three unique proprietary technologies and a Meltblown product manufactured to the highest standards.

Coldform2™

This technology has produced the industry leader in usage, hands down, of a sustainable natural based sorbent. Having undergone significant upgrades, it really is a high performance product and in many cases outperforms more traditional Meltblown alternatives.

Available in Maintenance and Oil-only types, this absorbent also comes in a range of weights and formats. A spun-bond lamination is available either on the top, or on the top and bottom which adds considerable strength.

- ✓ made from natural fibers
- ✓ provides good traction or slip resistance
- ✓ perforation on pads and rolls for easy use
- ✓ flame resistant
- ✓ very soft and also comes in laminated options

Airmatrix™

This technology produces sorbents which are made from recycled synthetic fibers. Airmatrix offers a synthetic alternative to natural fiber products such as Coldform2. This is our fastest growing technology, only recently introduced in Maintenance and Chemical. The technology produces durable and highly absorbent products.

Thanks to unique manufacturing processes this sorbent has extremely high absorbency rates, while at the same time it is very soft and drapable. Laminated on both the top and bottom, Airmatrix™ has good strength and durability.

- ✓ made from recycled synthetic fibers
- ✓ good strength and durability
- ✓ high absorbency rates
- ✓ exceptional chemical resistance
- ✓ soft and drapable

SpillLock™

Here's how this revolutionary feature improves the pad or roll's performance-

- it turns aqueous-based liquids into a leak-resistant gel
- it allows the fibers to absorb up to 150 times their own weight
- it's ideal for using on offensive or messy spills that must not leak out of the pad

44 Tips 99

SpillLock™ is added to our laminated sustainable Maintenance products and massively improves a sorbent's performance.

See what happens when SpillLock™ is added to a sorbent on page 42

Ultraclean™

Ultraclean is an amazing new technology that produces very high end solutions. The sorbents have undimpled, beautifully finished surfaces.

It features superior strength and is engineered to provide a balanced performance, absorbing oil and water equally. Ultraclean™ is also available with a spun-bond top layer of lamination as well as a blue poly-backed lower lamination.

- ✓ made with recycled polypropylene
- ✓ good strength and durability
- ✓ very high absorbency rates
- ✓ high chemical resistance
- ✓ available as perforated pads and rolls

Meltblown

This is still the most widely used technology but is losing market share quickly to the growing array of sustainable options. Meltblown is best for chemical applications and marine-based usages.

Our production method creates very fine fibers of a consistent size which, when combined with high loft, gives our Meltblown absorbents unbeatable performance and durability. Rigorous quality control guarantees consistent high quality.

- ✓ made with 100% polypropylene
- ✓ good strength and durability
- ✓ high absorbency rates
- ✓ high tech manufacturing process
- ✓ perforated pads and rolls

Spill Kits -why are they such a good idea?

A spill can happen at any time. So if you haven't got the kit to clean it up close at hand then things can get really messy, really quickly!

It's also worth noting, that not only do spill kits make good sense, but in some cases the law requires them to be in place and fully stocked, ready to prevent harm to the environment.

Performance and technology neatly packaged

It seems like every manufacturer and spill control dealer has their own take on what a spill kit should contain. We have again combined the best performers from all our technologies and presented a tight, highly absorbent grouping of spill kits which covers the market very well. In addition to combining the best of the best in each of the Maintenance, Oil-only and Chemical spill kits, all the pads are sealed in plastic bags.

Easy to choose, even easier to restock

Regardless of the size or type of the spill kit all the pads are packaged in groups of 10 pads. The plastic helps protect the pads and makes restocking a snap. Simply order replacement packages of ten and you don't need to go through the task of counting every single pad. The sealed ten packs can also be placed around the plant for spills or everyday usage. Another new idea to the spill kit category.

A step by step guide to dealing with a spill

1. Assess the risk

The first step is to identify the liquid that spilled. This will tell you how serious a threat it poses and what precautions need to be taken. Each ESP spill kit contains a guide on how to identify and clean up spills.

2. Select appropriate protective gear

Gloves and goggles are standard protection

Small mobile kits

Use these in just about any mobile transportation setting: trucks, cars, boats, tow trucks, and for small manufacturers with very limited liquids present.

“ Tips ”

This family of spill kits can suit almost every application.

Static larger kits

These are kits which are too heavy or bulky to take to a spill and are generally strategically placed close to the potential spill location.

“ Tips ”

Best to always carry the Chemical version as it will absorb most every liquid that could ever be encountered.

Mobile large kits

We think the best option as they can be strategically placed or moved at high speed to the unexpected spill location.

“ Tips ”

Spills by their nature are unpredictable. Fast response is always best and these kits can travel quickly when needed.

for many types of spills. Be sure to protect your hands, eyes and skin. For more aggressive spills, a full HazMat suit may be required. If toxic fumes are present, use a ventilator. ESP spill kits contain goggles and gloves. **Remember:** if you can't identify the spilled substance, treat it as highly toxic and unsafe.

3. Contain the spill

Use ESP absorbent socks found in each spill kit to contain the spill and keep it from spreading or contaminating water sources.

4. Stop the flow of the spill

Act quickly and safely to stop the source of the spilled material and minimize the impact of the spill.

5. Clean up the spill

Carefully and thoroughly clean up the spill using the appropriate sorbents.

6. Dispose and decontaminate

Dispose of all used sorbents and other contaminated materials according to company standards, as well as all local,

state and federal regulations. If necessary, decontaminate the site, personnel and equipment.

7. Prepare the necessary reports

Complete all required notifications and reports regarding the spill as mandated by the company, as well as all local, state and federal regulators.

Pads in packs of 10 **sealed and ready to go**

The entire range of sustainable, essential spill kits have their pads sealed in packages of ten pads. This makes restocking the kits very simple and helps protect the pads from the elements.

Pack of ten pads

SK-OZB	Oil-only	Truck Spill Kit

SK-UZB

Truck Spill Kits

These compact zipper bags fit easily behind truck seats or in the tool box. Covered in water resistant vinyl, they work well in outdoor situations. At construction sites or in off-road applications, their weight and size make them particularly handy.

“ Tips ”

These small kits are by far our biggest seller in this family.

SK-OZB

5 Gallon Spill Kits

These compact spill kits are a great way to be prepared for minor spills, or to add extra support for larger ones. The drum container protects items, keeping them clean, dry and ready when needed.

SK-U5

5 Gallon spill kit in **Maintenance, Oil-only or Chemical**

Contains:

- 10 x pads
- 3-3" x 4' socks
- 1 x pair of gloves
- 1 pair of goggles
- 1 temporary disposal bag

66 Tips 99

Very similar use to the truck kit but in a durable container.

Unique shapes and sizes **for unique situations**

Pads and rolls represent the lion's share of the market but there are certainly instances where more tailored spill control works better. In this section we explain briefly which situation requires which product.

Wick products

This is a new family of high performance products tailored to very specific uses. In each instance the product category is new or under developed.

Socks

These are used mostly around equipment which requires an absorbent that can bed and conform around things. They are also a mainstay in spill kits because of their ability to rapidly contain small spills. They come in

Maintenance, Oil-only and Chemical.

Pillows

Pillows are even more specific in their use and are usually deployed under large leaks as they can hold sizable quantities of fluid. Because of their ability to hold large quantities, pillows are found in all the larger spill kits.

Booms

These are similar to Oil-only socks but bigger

in diameter and length. They are used almost exclusively for marine-based spills and come in 10' sections that quickly clip together.

Industrial rugs

These are great products that are often overlooked. Many facilities use these long, wide and durable sorbent rolls to help keep floors and outside areas clean.

Wick products

We constantly develop new and better products when we see opportunities. These products help our customers expand their business and offer a sustainable, smarter solution for their customer.

66 Tips 99

These products fall more into the 'Jan San' market than the MRO area. Large opportunities exist here.

Socks

Have been a constant since the inspection of this industry. They are best used around equipment and in spill kits to help contain/dam liquids. They come in many lengths but the industry standard 4' used in multiples does any job.

66 Tips 99

Nothing beats our super absorbent maintenance and chemical socks - they outperform all others.

Pillows

They are not used very often but can absorb a lot of liquid. Spill kits are the big user of this type of absorbent.

66 Tips 99

We offer large and small sizes to best cover the spectrum of use.

Booms

We pioneered the single skin boom, and its remarkable strength made it the hit of the Gulf Oil Spill. These are very strong and will not fall apart like other industry produced sock-and-net booms.

66 Tips 99

Because they are so strong, fast moving water is no problem.

Industrial Rugs

These are used in many industries ranging from steel mills to rail yards. Very sturdy and somewhat absorbent they are most often used to keep long walkways clean.

66 Tips 99

Our Coldform2™ rail mat has become a top seller and can be used as an oil drilling rig mat also.

SpillLock™

SpillLock™ truly is magic and is a result of science bringing us entire new classes of materials. The future is very exciting and new materials will dramatically change our industry over the next decade.

SpillLock™ is a very small diameter fiber which absorbs 150 times its own weight in water. We carefully mix a small percentage into the products containing SpillLock™ and the result is a transformed high performance absorbent. The more SpillLock™, the higher the absorbency and the water wick has almost 30%! The following sequence of shots shows just how powerful a small amount of these fibers is.

Above: The process that happens as an impurity is absorbed by the SpillLock™ fibers

Water-Wick

Fluid control strip

WWK

“ Tips ”

Its performance beats the competition and it has a high recycled/sustainable content.

Description

- Super absorbent strip containing high levels of SpillLock™
- 100’ perforated every 24”
- Strong printed yellow spun-bond covers
- High absorption capacity

- High visibility printing in 4 languages
- Absorbs completely due to unique construction

Key Features

- Large contact area with floor surface
- A recycled solution

Application

- Use product to contain aqueous-based spills.
- Designed for ease of use in refrigeration areas
- Floor care, HVAC, cleaning professionals

WWK	Maintenance	100’ perforated every 24”	super absorbent strip

Bio-Wick

Is a fast response kit tailored to unwelcome spills such as vomit. The smartly designed box instantly converts into a scoop and receptacle. Bus lines, trains and schools are having great success with the product as it can also be stored almost anywhere. There is nothing on the market that compares to this product.

BIOWICK-10

BIOWICK

Bio-Wick Spill Kit

Contains:

- 250 grams of wick powder
- 1 x pair gloves
- 1 x biohazard bag
- 2 x clean up wipes

The box design is pure genius and makes clean up very fast.

Item No.	Format	Size	Quantity in pack	Description
BIOWICK	Maintenance	250 gms	(30)	Bio-Wick spill kit
BIOWICK-10	Maintenance	250 gms (10)	Bio-Wick spill kit

Drip-Wick

Urinal mats are an established market and product category but we saw a large opportunity to improve them. (The current products are mostly plastic, have no recycled material content and promote splashing off

the surface. This just moves the urine and renders the product ineffective.) Our Urinal Mat, Drip-wick, sets a whole new standard.

Secondary Splash Test

We used blue ink to show how splash from the mat can contaminate surrounding floor surfaces

A competitor's mat showing considerable secondary splash onto the surrounding floor

A second competitor's pad showing the spread of ink that splashed off the mat

ESP's Drip-Wick mat shows virtually no secondary splash

Drip-Wick Disposable Urinal Floor Mat

66 Tips 99

We can supply the product in the customer's colors for both the absorbent core and the plastic frame.

DRIPSG

DRIPSB

30GS34-SB	Maintenance	3" x 48" 30/Case	Sock
30WS34-SB	Oil-only	3" x 48" 30/Case	Sock
30YS34-SB	Chemical	3" x 48" 30/Case	Sock

Super Absorbent Flake sock

Demo these socks and you will be impressed.

Similar to the new material science featured in SpillLock™, our Super Absorbent Flake sock is yet another example of the continuing evolution of material science and its impact on our industry.

Super Absorbent Flake socks absorb huge amounts of water-based liquids such as cutting oils. Their most impressive quality is that they can handle most all liquids and are classed as a Chemical absorbent. They have a strong spun-bound cover and are available in Maintenance and Chemical. Our Oil-only sock contains Meltblown and Coldform2™ fibers also in a no lint spun-bound cover.

Above: As the sock is placed into the liquid all the fluid is quickly absorbed- Super Absorbent Flake Sock, living up to its name

Pillows in Maintenance and Oil-only

Description:

- Fast-wicking surface area and high absorption capacity shorten cleanup time
- Large surface area and absorbent contents soak up larger spills
- Highly flexible pillows fit in tight spaces

Application

- Ideal for plant maintenance, these pillows absorb drips and leaks too large for a pad
- Place them under machines and leaky hydraulic hoses
- They fit easily into cramped spaces and mold conveniently to uneven surfaces

66 Tips 99

Most all spill kits utilize these.

Meltblown and Coldform2™

Needle Punch and Poly Backed Needle Punched rolls in Maintenance

Description:

- Heavy-duty needle punch is heat set for long-lasting service
- Poly backed version has leak-resistant backing layer
- Can withstand forklift and foot traffic

Application

- Lay out long rolls alongside machines, on sidewalks or wherever you need heavy-duty, absorbent rugs. Use rolls to cover long areas quickly.

“ Tips ”

Steel mills and very heavy industry use these.

Ultraclean™

Item No.	Format	Size	Description

Rail Mats in **Oil-only**

Description:

- Constructed from three layers bonded together
- Top layer is black or dark-gray UV-stabilized needle punch
- Core is white, oil-only ColdForm2™
- Bottom layer is a heavy white plastic that prevents oil spills from leaking through to the ground

Application

- Protect railway yards and other transportation facilities from oil leaks during maintenance with these durable rail mats
- Custom order sizes are also available.

“ Tips ”

Most competitors' rail mats are held together with point bonds. Ours is glued throughout making it much more durable.

Coldform2™

RM57100-CF	Oil-only	57" x 100' one per package	
RM19100-CF	Oil-only	19" x 100' two per package	

Granular sorbents **simply sprinkle on and sweep away**

The use of granular absorbents has fallen greatly over the last ten years because of the advent of non woven pads and rolls. Granular absorbents still have a use but are usually outperformed by the

newer types of absorbent pads and rolls. Granulates can also contribute to the mess if not used properly. In addition, most of the granular products used today contain harmful silica dusts.

Magic Monkey

Safe for people, plants, animals and food processing facilities, this granular sorbent makes all types of liquid spills easy to sweep up.

“ Tips ”

Fantastic product for not leaving any residue after cleanup.

Gorillazorb

Made from 100% recycled materials, this handy non-abrasive granular sorbent can be spread around equipment to absorb oil- and water-based leaks.

“ Tips ”

Use this granular outside as the particles will not blow away as easily as the Magic Monkey.

Above: The Monkey Magic product is brushed into the spill. It quickly absorbs the fluid, and can be easily removed and disposed of.

Granular

Magic Monkey Sorbent Granular

Key Features

- Absorbs liquids of any viscosity and leaves surfaces clean and dry
- Lightweight even when saturated, making it less costly to dispose of than heavier granular sorbents
- Safe for people, plants, animals and food processing facilities or surfaces including concrete, tile or asphalt

Application

- Keep this dry absorbent on hand for most spills except hydrofluoric acid
- Use it to change spills into solids that can be easily swept away, reducing clean-up time

“ Tips ”

Fantastic product, cleans up without leaving any residue behind.

We stand behind **our products**

We know our continued success depends on how well we predict and respond to customer needs. Our promise: first-rate service and consistently high quality products – all at a great price.

Our focus is on developing and manufacturing innovative new sorbent products that increase the competitiveness of our customers. All backed up with a guarantee that gives you peace of mind.

WARRANTY

We guarantee our products

At Evolution Sorbent Products (ESP), we warrant our products according to the terms and conditions stated in our sales contracts.

DISCLAIMER

Limited Liability

Evolution Sorbent Products' liability shall not be subject to any other obligations or liabilities arising out of breach of contract, warrant, tort (including negligence and strict liability) or other theories of law with respect to products sold by ESP or any undertakings, acts or omissions relating thereto.

ESP shall not be liable for and disclaims all consequential, incidental and contingent damages whatsoever. The remedies set out herein are exclusive.

COMPLIANCE

Comply with all Handling, Storage and Disposal Regulations

When it comes to handling, storing and disposing of these products, you must comply with all local, state and federal regulations. Various fluids absorbed may be hazardous or toxic; therefore, be sure to dispose of them according to the relevant regulations.

CAUTION

Flammable and Hazardous Fluids still need caution when absorbed

Remember that flammable and other hazardous liquids absorbed by various materials are still unsafe. They can, under certain conditions, spontaneously ignite. Ensure that all personnel handling these materials do so with caution and that they always wear protective clothing, as well as respiratory devices when required.
